

CP2 (C2): what the $\rho_{std} < 0.04$ criterion kills at N=256 — 97-98% genuine chimera deaths, 2-3% degenerate channel
 filtered Weibull k unchanged (0.110: 1.220 $\rightarrow$ 1.241; 0.130: 1.466 $\rightarrow$ 1.481, CIs exclude 1)

$\beta=0.13$, N=256, seed 20266309, $\tau=1406$: canonical single-arc chimera
 (struct. to death, $m^*=1$)

$\beta=0.11$, N=256, seed 20265110, $\tau=1440$: multi-headed chimera
 (struct. to death, $m^*=2$)

$\beta=0.13$, N=256, seed 20266310, $\tau=792$: degenerate decay channel (rare, ~2-3%)
 (chimera dissolves early $\rightarrow$ limbo)
